

The EA Tools Workshop is an introduction and hands on workshop designed to enable Enterprises to effectively and efficiently; choose a tool, and how to operate it in a sustainable way by adopting a Pragmatic approach to EA Tool Selection and Adoption.

Run over 1 day and using this book, the first part of the workshop presents the concepts required to understand an EA Modelling Tool, what it used for, what information must be modelled, and pragmatic methods for adoption and use.

The remainder of the day is a hands-on workshop where you will formulate your own tailored approach for selection, define which requirements are key to you, and develop a shortlist.

### Why Should I attend this Workshop?

Enterprises (Public Companies, Private Companies, Government Agencies) spend a lot of money on tools. But many of these tools sit on the shelf or are used in only small ways.

The most common reasons are that:

The tool they selected is not is not appropriate for their Enterprise.

The way the tool is being used is not appropriate for their Enterprise.

If you are going to be spending a lot of money on a tool, it is imperative that the project stands the best chance of success.

**This workshop will provide you with the context and approach to give you that best chance of success.**

### Who should attend?

Anyone who wants to stop wasting time and money and reduce the number of project failures. E.g. CIOs, Head of PMO, Head of Business Analysis, Head of S&A, Head of Solution Delivery, Enterprise Architects, Solution Architects, Business Analysts, Project Managers, Developers, Testers, Configuration Managers, Change Managers, etc, etc.
